ABSTRACT

Alvarado, Rejay Y. and Russell P. Sodusta, **A Case Analysis of the Rehabilitation Programs of the Municipality of Pavia, Iloilo after Typhoon Frank.** An Undergraduate Research presented to the Division of Social Sciences, College of Arts and Sciences, University of the Philippines Visayas. May 2011.

This undergraduate research entitled A Case Analysis of the Rehabilitation Programs of the Municipality of Pavia, Iloilo after Typhoon Frank presents the different rehabilitation programs implemented by the Local Government of Pavia and their effects to the people of the said municipality. Using three different methods of data gathering and data triangulation, the researchers found out that the LGU of Pavia implemented a number of rehabilitation programs which include human, structural and livelihood rehabilitation. Results, however, show that there is an information gap between the implementers and the receiving end since the people barely recognize or are aware of, or are dissatisfied with the efforts and the performance of the LGU. The results also highlight some of the factors that lead to the vulnerability of the Municipality of Pavia to natural hazards. The analysis, which uses Piers Blaikie's Release of Pressures Model, entails the ways by which the vulnerabilities of the municipality will be solved and eventually progress to safety. The researchers' recommendations include suggestions for improvement based on the thematic areas of the Hyogo Framework for Action: governance; risk assessment; knowledge and information; risk management and vulnerability reduction; and, disaster preparedness and response.
